## Channel displays no recording button

Chris - 2018-06-13 - in just:in v3.0

If you are seeing no recording button, then the channel is either in Schedule mode (channel starts and stops recording automatically) or the channel is not configured correctly. If the channel is not in schedule mode, then please re-select the capture- and destination-preset of the first capture-id. Then the recording button should appear when moving the mouse into the preview area.
