How to generate a Apple Photo JPEG capture preset

Chris - 2018-05-25 - in [General](#)

With following steps you can create a Capture Preset with Apple Photo JPEG:

1. Open the engine application
2. Go to Preferences
3. Switch to the Presets tab
4. Create a new preset
5. Select Custom as TV Norm
6. Select AV Foundation QuickTime as Container
7. Select 16:9 as Aspect Ratio
8. Select Apple Photo JPEG as Codec
9. Then another setting window appears
10. Select your settings of choice
11. Select audio channels and audio alignment
12. Save the preset
