How to install a new version over an older version?

Georg - 2026-05-11 - General Information

I already use software from Tools On Air. Now that there are newer versions available i would like to know how i can perform an upgrade?

Usually a simple installation over the currently installed version will work. All the presets (just:in) and all the channel informations (just:play/live) should be available after that.
With our installer .dmg, we provide an uninstaller for those customers who would like to do an uninstall of the current installed version. Please note that this uninstaller will uninstall EVERYTHING which have been installed by the installer before, PLUS ALL presets and channel files.

For further information, please refer to the dedicated Administrator Manual included with the installer.
