Is it possible to use Closed Captions and the built-in switch to live function at the same time?

Georg - 2018-05-25 - in Knowledgebase just:live/play

When using the DSK based built-in switch-to-live function, closed captions are NOT passed through the AJA hardware AND closed captions can NOT be added to the SDI output. However, when closed captioning is activated for a specific channel, just:out will write CC data to the outgoing signal. In other words it is not possible to add CC data while using the built-in switch-to-live function. In this situation, the traditional setup with an external CC capable mixer should be used.

Using the non DSK based switch-to-live function, supported CC data will be passed through.

In general, CC is only supported when using an AJA device. Currently we do NOT support the play out of CC data using any BMD device.
