Upgrading just:in v1.8 to v2.x

Chris - 2018-05-25 - in [just:in v2.x](#)

If you are upgrading your system from v1.8 to v2.0, it is recommended to follow these steps:

- Delete the config.xml, which is located at /Library/Application Support/ToolsOnAir/Just In
- Delete the Just In folder, which is located at /Applications
- Open the Terminal application and enter following command `defaults write com.toolsonair.justin`
- Install v2 by using the dmg installer file

Please also beware of following points:

- Capture- and destination-presets can be reused from v1.8
- Naming conventions can not be used from v1.8
- Naming conventions can now be found within the engine preferences
- A new activation code is required for v2.0

If you have any further questions, do not hesitate to contact us.
