## When i start my TOA app i get a warning that my app is not optimised for my Mac.

Georg - 2018-11-20 - in General Information

Beginning with macOS 10.13.5, Apple started to show a warning in case an app is started using 32-bit QuickTime components. All TOA apps are currently supporting 32-bit QuickTime components and we are working on new versions which will be 64-bit only.

This warning does not interrupt the startup of the application and is shown once every 30 days..
