Which apps are included in the ToolsOnAir product suite?

just:in is an innovative Apple Macintosh-based ingest solution that offers batch, scheduled and crash recording. A comprehensive ingest solution for single / multi-camera or VTR setups, just:in is designed to seamlessly integrate into the production workflow of any TV station or post-production facility.

just:news room has an innovative user interface and powerful feature set, ToolsOnAir's Broadcast Suite enables TV and News stations to easily integrate ENPS and OCTOPUS newsroom systems and run stories with professional video and real-time graphic templates for news, weather, stock, sports, and other broadcast events.

just:play is an automated, Apple-based 24/7 broadcast playout server. just:play easily integrates live studio and satellite feeds, as well as real-time graphics including corner logos, lower thirds and tickers that update live from RSS feeds or remote databases.

just:live is designed to meet the fast-paced, time-consuming demands of live TV broadcast, including news, sports and talk shows. just:live manages your on-air videos and real-time graphics in any live situation, providing you with total control over video playout and real-time graphics.

composition:builder enables small and mid-sized TV stations to easily create and implement professional real-time graphic templates for news, weather, stock, sports, and other broadcast events. These templates can then be used within just:play and just:live.

live:cut is designed to make the most of today's multi-camera productions, dramatically reducing production time by eliminating many time-consuming production processes. From talk and game shows to soaps and sitcoms up to live concerts and event

recordings, live:cut is a powerful solution for any multi-camera production.
