## WARNING! Teamviewer 12 not compatible with just:live and just:play

2017-06-02 - Georg - in General

Running v12 of Teamviewer and just:out on the same mac causes a CoreAudio related just:out crash every time a user logs in/out. We strongly recommend to use Teamviewer HOST v11 which does not cause this crash and which can be downloaded from here: [TeamViewer Host](#)
